CUnit - A Unit testing framework for C.
http://cunit.sourceforge.net/

Automated Test Run Results

Running Suite TC01 - Initialize a PCAN Channel

	Running test TC01.1 - Initialize PCAN-USB interface with default parameters ...	Passed
	Running test TC01.2 - Initialize PCAN-USB interface a second time ...	Passed
	Running test TC01.3 - Initialize PCAN-USB interface a second time after uninitializing ...	Passed
	Running test #TC01.4 - Initialize PCAN-USB interface when interface is not present ...	Failed

File Name	../Testcases/Testcases.c	**Line Number**	734
Condition	CU_FAIL(Semi-automatic or manual test not executed for the current library version)		

	Running test #TC01.5 - Initialize PCAN-USB interface when interface is used by another process ...	Failed

File Name	../Testcases/Testcases.c	**Line Number**	734
Condition	CU_FAIL(Semi-automatic or manual test not executed for the current library version)		

	Running test TC01.6 - Initialize PCAN-USB interface with parameter 'Channel == PCAN_NONEBUS' ...	Passed
	Running test TC01.7 - Initialize PCAN-USB interface with parameter 'Channel == PCAN_USBBUS1 - 1' ...	Passed
	Running test TC01.8 - Initialize PCAN-USB interface with parameter 'Channel == PCAN_USBBUS8 + 1' ...	Passed
	Running test TC01.9 - Initialize PCAN-USB interface with parameter 'Btr0Btr1 == PCAN_BAUD_1M' ...	Passed
	Running test TC01.10 - Initialize PCAN-USB interface with parameter 'Btr0Btr1 == PCAN_BAUD_500K' ...	Passed
	Running test TC01.11 - Initialize PCAN-USB interface with parameter 'Btr0Btr1 == PCAN_BAUD_250K' ...	Passed
	Running test TC01.12 - Initialize PCAN-USB interface with parameter 'Btr0Btr1 == PCAN_BAUD_125K' ...	Passed
	Running test TC01.13 - Initialize PCAN-USB interface with parameter 'Btr0Btr1 == PCAN_BAUD_100K' ...	Passed

	Running test TC01.14 - Initialize PCAN-USB interface with parameter 'Btr0Btr1 == PCAN_BAUD_50K' ...	Passed
	Running test TC01.15 - Initialize PCAN-USB interface with parameter 'Btr0Btr1 == PCAN_BAUD_20K' ...	Passed
	Running test TC01.16 - Initialize PCAN-USB interface with parameter 'Btr0Btr1 == PCAN_BAUD_10K' ...	Passed
	Running test TC01.17 - Initialize PCAN-USB interface with parameter 'Btr0Btr1 == PCAN_BAUD_5K' ...	Passed
	Running test TC01.18 - Initialize PCAN-USB interface with parameter 'Btr0Btr1 == 0x0000' ...	Passed
	Running test TC01.19 - Initialize PCAN-USB interface with parameter 'Btr0Btr1 == 0xFFFF' ...	Passed
	Running test #TC01.20 - Initialize PCAN-USB interface with different baud rate than on real CAN ...	Failed

File Name	../Testcases/Testcases.c	**Line Number**	734
Condition	CU_FAIL(Semi-automatic or manual test not executed for the current library version)		

Running Suite TC02 - Uninitialize a PCAN Channel

	Running test TC02.1 - Uninitialize PCAN-USB interface running with default parameters ...	Passed
	Running test TC02.2 - Uninitialize PCAN-USB interface when not initialized before ...	Passed
	Running test TC02.3 - Uninitialize PCAN-USB interface after reinitializing ...	Passed
	Running test #TC02.4 - Uninitialize PCAN-USB interface when interface is not present anymore ...	Failed

File Name	../Testcases/Testcases.c	**Line Number**	734
Condition	CU_FAIL(Semi-automatic or manual test not executed for the current library version)		

	Running test #TC02.5 - Uninitialize PCAN-USB interface when interface is used by another process ...	Failed

File Name	../Testcases/Testcases.c	**Line Number**	734
Condition	CU_FAIL(Semi-automatic or manual test not executed for the current library version)		

	Running test TC02.6 - Uninitialize PCAN-USB interface with parameter 'Channel == PCAN_NONEBUS' after initializing ...	Passed
	Running test TC02.7 - Uninitialize PCAN-	

	USB interface with an invalid value for parameter 'Channel' after initializing ...	Passed	

Running Suite TC03 - Reset the receive and transmit queues

	Running test TC03.1 - Reset queues while PCAN-USB interface is running with default parameters ...	Passed
	Running test TC03.2 - Reset queues when PCAN-USB interface is not initialized before ...	Passed
	Running test TC03.3 - Reset queue with an invalid value for parameter 'Channel' ...	Passed
	Running test #TC03.4 - Reset queues and check if the transmit queue is empty ...	Failed

File Name	../Testcases/Testcases.c	**Line Number**	734
Condition	CU_FAIL(Semi-automatic or manual test not executed for the current library version)		

	Running test TC03.5 - Reset queues and check if the receive queue is empty ...	Passed

Running Suite TC04 - Get the current BUS status

	Running test TC04.1 - Get BUS status while PCAN-USB interface is running with default parameters ...	Passed
	Running test TC04.2 - Get BUS status when PCAN-USB interface is not initialized before ...	Passed
	Running test TC04.3 - Get BUS status with an invalid value for parameter 'Channel' ...	Passed
	Running test #TC04.4 - Get BUS status when PCAN-USB interface is not present anymore ...	Failed

File Name	../Testcases/Testcases.c	**Line Number**	734
Condition	CU_FAIL(Semi-automatic or manual test not executed for the current library version)		

	Running test #TC04.5 - Get BUS status while errors on CAN bus are present ...	Failed

File Name	../Testcases/Testcases.c	**Line Number**	734
Condition	CU_FAIL(Semi-automatic or manual test not executed for the current library version)		

Running Suite TC05 - Read a CAN message from the receive queue

	Running test TC05.1 - Read a CAN message while PCAN-USB interface is running with default parameters ...	Passed
	Running test TC05.2 - Read a CAN message when PCAN-USB interface is not initialized before ...	Passed
	Running test TC05.3 - Read a CAN message with an invalid value for parameter 'Channel'	Passed

	...		Passed
	Running test TC05.4 - Read a CAN message with illegal parameter 'MessageBuffer == NULL' ...		Passed
	Running test TC05.5 - Read CAN messages from the receive queue and check for amount and order ...		Passed
	Running test #TC05.6 - Read CAN messages from the receive queue - long term stress test ...		Failed

File Name	../Testcases/Testcases.c	**Line Number**	734
Condition	CU_FAIL(Semi-automatic or manual test not executed for the current library version)		

	Running test #TC05.7 - Read CAN messages from the receive queue - timestamp accuracy test ...		Failed

File Name	../Testcases/Testcases.c	**Line Number**	734
Condition	CU_FAIL(Semi-automatic or manual test not executed for the current library version)		

	Running test #TC05.8 - Read CAN messages from the receive queue when interface is not present anymore ...		Failed

File Name	../Testcases/Testcases.c	**Line Number**	734
Condition	CU_FAIL(Semi-automatic or manual test not executed for the current library version)		

	Running test #TC05.9 - Read CAN messages from the receive queue while errors on CAN bus are present ...		Failed

File Name	../Testcases/Testcases.c	**Line Number**	734
Condition	CU_FAIL(Semi-automatic or manual test not executed for the current library version)		

	Running test TC05.10 - Read the status of the receive queue after an overrun ...		Passed

Running Suite TC06 - Transmit a CAN message

	Running test TC06.1 - Transmit a CAN message while PCAN-USB interface is running with default parameters ...		Passed
	Running test TC06.2 - Transmit a CAN message when PCAN-USB interface is not initialized before ...		Passed
	Running test TC06.3 - Transmit a CAN message with an invalid value for parameter 'Channel' ...		Passed
	Running test TC06.4 - Transmit a CAN message with illegal parameter 'MessageBuffer == NULL' ...		Passed
	Running test TC06.5 - Transmit a standard		

	CAN message with a valid 11-bit identifier and no data bytes (DLC = 0) ...	Passed
	Running test TC06.6 - Transmit a standard CAN message with a valid 11-bit identifier and one data byte (DLC = 1) ...	Passed
	Running test TC06.7 - Transmit a standard CAN message with a valid 11-bit identifier and two data bytes (DLC = 2) ...	Passed
	Running test TC06.8 - Transmit a standard CAN message with a valid 11-bit identifier and three data bytes (DLC = 3) ...	Passed
	Running test TC06.9 - Transmit a standard CAN message with a valid 11-bit identifier and four data bytes (DLC = 4) ...	Passed
	Running test TC06.10 - Transmit a standard CAN message with a valid 11-bit identifier and five data bytes (DLC = 5) ...	Passed
	Running test TC06.11 - Transmit a standard CAN message with a valid 11-bit identifier and six data bytes (DLC = 6) ...	Passed
	Running test TC06.12 - Transmit a standard CAN message with a valid 11-bit identifier and seven data bytes (DLC = 7) ...	Passed
	Running test TC06.13 - Transmit a standard CAN message with a valid 11-bit identifier and eight data bytes (DLC = 8) ...	Passed
	Running test TC06.14 - Transmit a standard CAN message with a valid 11-bit identifier and invalid data length code (DLC = 9) ...	Passed
	Running test TC06.15 - Transmit a standard CAN message with a valid 11-bit identifier and invalid data length code (DLC = 255) ...	Passed
	Running test TC06.16 - Transmit a standard CAN message with a valid 29-bit identifier (invalid for standard messages) ...	Passed
	Running test TC06.17 - Transmit a standard CAN message with an invalid 11-bit identifier (ID = 0x20000000) ...	Passed
	Running test TC06.18 - Transmit a standard CAN message with an invalid 11-bit identifier (ID = 0xFFFFFFFF) ...	Passed
	Running test TC06.19 - Request a standard CAN message with a valid 11-bit identifier and no data bytes (DLC = 0) ...	Passed
	Running test TC06.20 - Request a standard CAN message with a valid 11-bit identifier and one data byte (DLC = 1) ...	Passed
	Running test TC06.21 - Request a standard CAN message with a valid 11-bit identifier and two data bytes (DLC = 2) ...	Passed

	Running test TC06.22 - Request a standard CAN message with a valid 11-bit identifier and three data bytes (DLC = 3) ...	Passed
	Running test TC06.23 - Request a standard CAN message with a valid 11-bit identifier and four data bytes (DLC = 4) ...	Passed
	Running test TC06.24 - Request a standard CAN message with a valid 11-bit identifier and five data bytes (DLC = 5) ...	Passed
	Running test TC06.25 - Request a standard CAN message with a valid 11-bit identifier and six data bytes (DLC = 6) ...	Passed
	Running test TC06.26 - Request a standard CAN message with a valid 11-bit identifier and seven data bytes (DLC = 7) ...	Passed
	Running test TC06.27 - Request a standard CAN message with a valid 11-bit identifier and eight data bytes (DLC = 8) ...	Passed
	Running test TC06.28 - Request a standard CAN message with a valid 11-bit identifier and wrong data length code ...	Passed
	Running test TC06.29 - Request a standard CAN message with a valid 11-bit identifier and invalid data length code ...	Passed
	Running test TC06.30 - Request a standard CAN message with a valid 29-bit identifier (invalid for standard messages) ...	Passed
	Running test TC06.31 - Request a standard CAN message with an invalid 11-bit identifier (ID = 0x20000000) ...	Passed
	Running test TC06.32 - Request a standard CAN message with an invalid 11-bit identifier (ID = 0xFFFFFFFF) ...	Passed
	Running test TC06.33 - Transmit a extended CAN message with a valid 29-bit identifier and no data bytes (DLC = 0) ...	Passed
	Running test TC06.34 - Transmit a extended CAN message with a valid 29-bit identifier and one data byte (DLC = 1) ...	Passed
	Running test TC06.35 - Transmit a extended CAN message with a valid 29-bit identifier and two data bytes (DLC = 2) ...	Passed
	Running test TC06.36 - Transmit a extended CAN message with a valid 29-bit identifier and three data bytes (DLC = 3) ...	Passed
	Running test TC06.37 - Transmit a extended CAN message with a valid 29-bit identifier and four data bytes (DLC = 4) ...	Passed
	Running test TC06.38 - Transmit a extended CAN message with a valid 29-bit identifier	Passed

	and five data bytes (DLC = 5) ...	Passed
	Running test TC06.39 - Transmit a extended CAN message with a valid 29-bit identifier and six data bytes (DLC = 6) ...	Passed
	Running test TC06.40 - Transmit a extended CAN message with a valid 29-bit identifier and seven data bytes (DLC = 7) ...	Passed
	Running test TC06.41 - Transmit a extended CAN message with a valid 29-bit identifier and eight data bytes (DLC = 8) ...	Passed
	Running test TC06.42 - Transmit a extended CAN message with a valid 29-bit identifier and invalid data length code (DLC = 9) ...	Passed
	Running test TC06.43 - Transmit a extended CAN message with a valid 29-bit identifier and invalid data length code (DLC = 255) ...	Passed
	Running test TC06.44 - Transmit a extended CAN message with an invalid 29-bit identifier (ID = 0x20000000) ...	Passed
	Running test TC06.45 - Transmit a extended CAN message with an invalid 29-bit identifier (ID = 0xFFFFFFFF) ...	Passed
	Running test TC06.46 - Request a extended CAN message with a valid 29-bit identifier and no data bytes (DLC = 0) ...	Passed
	Running test TC06.47 - Request a extended CAN message with a valid 29-bit identifier and one data byte (DLC = 1) ...	Passed
	Running test TC06.48 - Request a extended CAN message with a valid 29-bit identifier and two data bytes (DLC = 2) ...	Passed
	Running test TC06.49 - Request a extended CAN message with a valid 29-bit identifier and three data bytes (DLC = 3) ...	Passed
	Running test TC06.50 - Request a extended CAN message with a valid 29-bit identifier and four data bytes (DLC = 4) ...	Passed
	Running test TC06.51 - Request a extended CAN message with a valid 29-bit identifier and five data bytes (DLC = 5) ...	Passed
	Running test TC06.52 - Request a extended CAN message with a valid 29-bit identifier and six data bytes (DLC = 6) ...	Passed
	Running test TC06.53 - Request a extended CAN message with a valid 29-bit identifier and seven data bytes (DLC = 7) ...	Passed
	Running test TC06.54 - Request a extended CAN message with a valid 29-bit identifier and eight data bytes (DLC = 8) ...	Passed
	Running test TC06.55 - Request a extended	

	CAN message with a valid 29-bit identifier and wrong data length code ...	Passed
	Running test TC06.56 - Request a extended CAN message with a valid 29-bit identifier and invalid data length code ...	Passed
	Running test TC06.57 - Request a extended CAN message with an invalid 29-bit identifier (ID = 0x20000000) ...	Passed
	Running test TC06.58 - Request a extended CAN message with an invalid 29-bit identifier (ID = 0xFFFFFFFF) ...	Passed
	Running test TC06.59 - Transmit a CAN message with illegal parameter 'MessageBuffer.MSGTYPE == 0x80' ...	Passed
	Running test TC06.60 - Transmit a CAN message with illegal parameter 'MessageBuffer.MSGTYPE == 0xFF' ...	Passed
	Running test #TC06.61 - Transmit CAN messages when interface is not present anymore ...	Failed
